

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS EASY MSCI EMERGING SRI S-SERIES PAB 5% CAPPED

Legal entity Identifier: 21380075693T4BVLNT78

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: ____%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

BNP PARIBAS
ASSET MANAGEMENT

The sustainable investor for a changing world

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the substitute basket underlying securities.

The MSCI Emerging SRI S-Series PAB 5% Capped (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the reference benchmark business involvement and controversies exclusion criteria;
- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology;
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments to which by the financial product is exposed are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the prospectus, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The investment manager is using, as of the date of the prospectus, BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus, to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation “POSITIVE” or “NEUTRAL” from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm “DNSH” principle) and should follow good governance practices. BNPP AM uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: [Sustainability documents - BNPP AM Corporate English \(bnpparibas-am.com\)](https://bnpparibas-am.com/sustainability-documents).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product take into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: [Sustainability documents - BNPP AM Corporate English \(bnpparibas-am.com\)](https://bnpparibas-am.com/sustainability-documents).

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators for the proportion of assets qualified as sustainable investments:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: [sustainability risk integration and Principal Adverse Impacts considerations](#).

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the product considers some principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

- 1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- 2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;
- 3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

More detailed information on the manner in which BNPP AM considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: [sustainability risk integration and Principal Adverse Impacts considerations](#).

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The product is an index-tracking passively managed fund.

The product seeks to replicate (with a maximum tracking error* of 1%) the performance of the MSCI Emerging SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M7CXESC index) ("the Index") by investing in a substitute basket, composed of, inter alia, shares of companies, debt securities or cash (synthetic replication). When investing in a basket of securities called substitute basket, the performance is swapped with the performance of the index, generating counterparty risk.

When investing in a sample of shares, the product tracking error may be higher.

The Index is composed of emerging markets companies selected on the basis of a minimum Environmental, Social and Corporate Governance (ESG) criteria (environmental opportunity, pollution and waste, human capital, corporate governance, etc.) and based on their efforts to reduce their exposure to coal and unconventional fossil fuels. It implements a cap that limits a company's maximum weight within the Index to 5% on each rebalancing date. In addition, the Index aims to comply with the Paris Aligned Benchmark (PAB) targets of reducing carbon intensity by at least 50% relative to the initial investment universe and achieving an additional decarbonisation target of 7% each year. As a result, companies involved in sectors with a potentially high negative ESG impact, those subject to significant

violations of the UN Global Compact principles and those involved in severe ESG-related controversies are excluded from the Index.

The type of approach used here is Best-in-class (Best-in-class approach identifies leaders in each sector based on the best ESG practices, while avoiding those that present high levels of risk and do not comply with minimum ESG standards according to the index administrator and its specialised partners). The extra financial strategy of the Index, carried out at each step of the investment process, may comprise methodological limitations such as the risk related to ESG investment or the Index rebalancing.

Further information on the Index, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

*The tracking error is a risk indicator that measures how closely a fund tracks the performance of its index.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.
- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.
- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.
- The financial product shall have the weighted average carbon footprint of its investment strategy portfolio at least 50% lower than the weighted average carbon footprint of its investment universe.
- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%.
- The financial product shall invest 30% of its assets in “sustainable investments” as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as “sustainable investment” are indicated in the above question “*What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*” and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- *What is the policy to assess good governance practices of the investee companies?*

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

As of the date of the prospectus, the financial product applies synthetic replication. Consequently, the asset allocation planned for this financial product, as well as any minimum proportion described below, are the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

In order to determine the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, BNPP AM has decided to use its internal methodologies through the calculation of the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment.

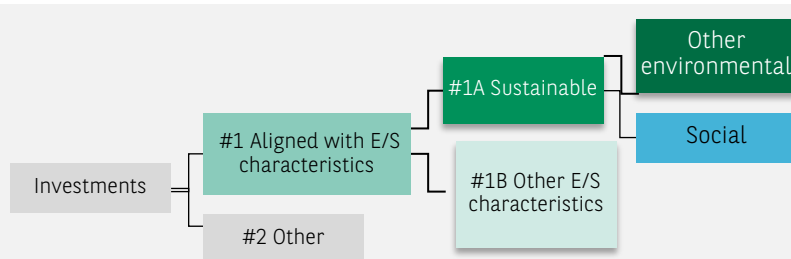

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum and the exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the Responsible Business Conduct (RBC) policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

● *How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?*

In synthetic replication, financial derivative instruments such as Total Return Swaps (TRS) are used on a continuous basis for achieving the investment policy which promotes environmental or social characteristics while ensuring that the securities physically held by the financial product (the 'substitute basket'), performance of which is switched against the performance of the investment strategy, respect minimum extra-financial safeguards.

Synthetic replication is a framework where the TRS counterparty hedges its position and thus brings liquidity to all or a significant part of the ESG underlyings.

Financial derivative instruments may be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

● To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

● *Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?*

☐ Yes:

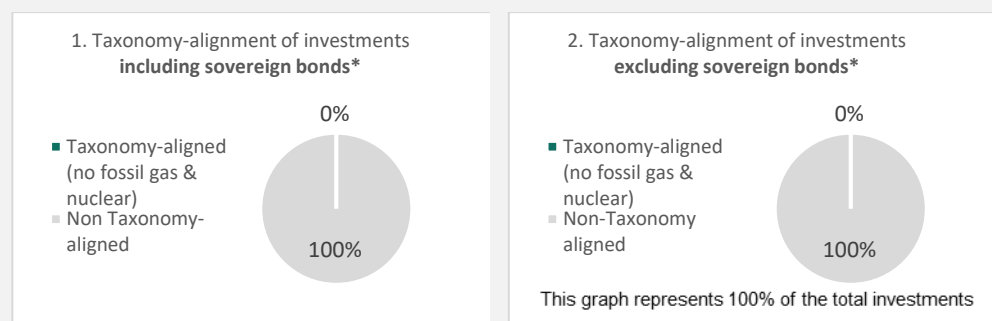

☐ In fossil gas

☐ In nuclear energy

☒ No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 7%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 7%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes , or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The MSCI Emerging SRI S-Series PAB 5% Capped (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- *How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?*

The environmental or social characteristics promoted by the financial product are directly linked to the ones of the reference benchmark as the investment objective of the financial product is to replicate the performance of the reference benchmark, including fluctuations, and to maintain the tracking-error between the financial product and the reference benchmark below 1%.

The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- *How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?*

The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the financial product which is to replicate the performance of the index, including fluctuations, and to maintain the tracking-error between the financial product and the index below 1%.

- *How does the designated index differ from a relevant broad market index?*

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *Where can the methodology used for the calculation of the designated index be found?*

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://www.bnpparibas-am.com> after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.
